

What is claimed is:

1. An insulating plug, for a discharge lamp device, comprising:

a body having a front end portion and a rear end portion;

an arc tube, fixedly held at the front end portion;

5 and

a lamp-side connector provided at the rear end portion, wherein said lamp-side connector is arranged so that a power-supplying connector can be attached to and detached from said lamp-side connector,

10 wherein said body is made of a glass-fiber-reinforced plastic.

2. An insulating plug as set forth in claim 1, wherein said glass-fiber-reinforced plastic includes from 20 weight % to 80 weight % glass fibers contained in a polyphenylene sulfide resin.

3. A discharge lamp device provided with an insulating plug as defined in claim 1.

4. A discharge lamp device provided with an insulating plug as defined in claim 2.
